Undergraduate Project

Project Name : " Earth Digging Machine. "

Description :

Hand held augers are used for drilling the holes for planting trees. The drilling of the holes typically involves cutting of the roots of the harvested stump with an implement such as an axe them using hand-held motorized auger to drill the hole to the desired depth.

Some of the devices currently used to drill holes for planting trees are held augers. Oil palm transplanter , AEON tree planter etc. It would , therefore be desirable to provide a device/machine to improve the operation of drilling a hole for the planting of trees , particularly in the tree farm operations in which the trees are arranged in a grid pattern and the seedlings are planted between more mature , un harvested trees.

Drilling is the act of making hole in a material using cutting equipment and the can be the done on the earth's surface. Hole drilling on the earth's surface is primarily done for several purposes , which include erection of structures , extraction of oil or planting trees. The structure erection in drilled holes include electricity poles , flag posts ,masts : buildings etc. extraction of oil involves a vigorous drilling exercise of extracting oil from depths of over 8
